Installation

EDGESAFE® SAFETY RAILING

THE CUSTOMIZABLE FOUNDATION FOR A COMPLETE SAFETY SYSTEM

By utilizing a universal, omnidirectional bracket, the EdgeSafe® Safety Railing is flexible enough to address almost any application (unlike a typical straight or 90-degree railing) and adaptable enough to follow virtually any required angle! It is also very easy to assemble and simple to install. From the top of the mezzanine to the ground level, use it to protect workers from elevated edges, control floor traffic or guard hazardous machines.

Customizable: Order any combination of horizontal rails, vertical posts, railing brackets or toeboards and easily adjust to any angle; construct the exact railing at the exact length you need (simply trim the horizontal rails, between 18" and 96", including post dimensions)

Conforms To Any Angle: The omnidirectional bracket means you're not restricted by 90-degree angles

Universal Post: Use all/any four sides of the post – one post does it all, no need for different corners, end posts, etc.

Use Any 1-1/2" Schedule 40 (or Schedule 10) Steel Pipe As A Horizontal Railing: Purchase locally, use what you have on hand, or include the pipe when placing your order

Meets OSHA Standards: OSHA 1910.29, ANSI A1264.1-2017, and Canada COHS SOR-86-304 Sections 2.12 and 2.13

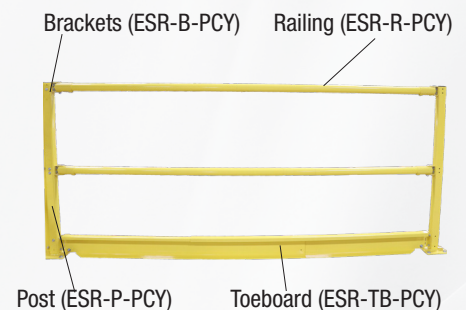

Can Be Used With A Single Top Rail: Great for non-fall-protection applications like shipping lanes, aisle violators, etc.

Easy To Assemble: Simple to install in virtually any application

Easy To Order: Call with dimensions or email us a simple sketch, and we will send you a proposal

Save On Shipping: This system is sold in components, which helps to minimize shipping costs

Finish: Comes with Powder Coat Yellow (PCY) finish or can be special ordered with a Hot Dipped Galvanized (GAL) finish

Notes On Sizing

- Maximum width between posts: 89"
- Height to the top of the top rail: 41-5/16"
- Height to the center of the mid rail: 21-7/8"

**Floor mounting hardware not included*
