VERTICAL LIFT FLOOD BARRIER (VL-580)

FLOOD BARRIERS FOR THE HARDEST AREAS TO PROTECT

The Vertical Lift Flood Barrier from PS Flood Barriers™ is the perfect solution to providing reliable flood protection to unique areas where conventional swinging, sliding and lift-out barriers will not work. Available with powered or manual operation, the Vertical Lift Flood Barrier is lowered to provide immediate water protection when flooding conditions are present. It is ideal for protecting sectional doors, loading docks, storefronts, interior hallways/rooms, ventilation shafts and areas with limited side room.

QUICK AND EASY DEPLOYMENT

- Manual or powered operation available
- Counterweighted for easy operation and deployment
- Compression sealed (requires no compressed air for activation)
- Manual latch system designed for simple, quick deployment

DESIGNED TO KEEP FLOODWATER WHERE IT BELONGS

- Flush sill design eliminates tripping hazard at opening
- Available in mild steel, stainless steel or aluminum construction
- Custom designed to meet your specific opening dimensions
