# FLOODSTOP BARRIERS

## FLOOD PROTECTION THAT LOCKS QUICKLY INTO PLACE

FloodStop Barriers is a unique, rapidly deployable flood barrier system that can be used for a variety of applications. Ideal for flood protection, reservoir deployment and road traffic delineation (traffic control), these barriers are assembled through a series of weighted interlocking pods. When assembled, some of the pods are prefilled, and the remaining pods self-fill with rising floodwater as flooding occurs. This, combined with the weighted connection keys, ensures an assembled barrier will always be denser than floodwater. With the system's versatility and easy deployment, these barriers are the perfect solution for municipalities, businesses or households and are an excellent alternative to sandbags. FloodStop Barriers are manufactured by Barrier Solutions.

### AVAILABLE IN THREE PRODUCT VARIATIONS

- FS25 FloodStop Barrier\* (25" high)
- FS36 FloodStop Barrier (36" high)

### EASY DEPLOYMENT WHEN YOU NEED IT MOST

- Rapidly deployed – easily assembled by a single person
- Self-balancing – no bolting required
- Multi-hub connection pod – allows for easy connection to walls and cornering
- Lightweight and multifunctional
- When floodwaters recede, pods empty themselves

### DESIGNED WITH YOUR UNIQUE APPLICATIONS IN MIND

- Flood protection – rapid response, semi-permanent or permanent options available
- Reservoir deployment – including spill kit and fluid containment
- Road traffic delineation (traffic control)
- Recyclable and reusable

*\*The FS25 FloodStop Barrier requires longer lead times as this product currently ships from overseas.*
